

## Overview

Quixiz is a business software factory that focuses its efforts on the industrialization of software. We help organizations take advantage of leading J2EE open source technologies (Tomcat, Struts, Spring, Hibernate, CVS, Ant, Eclipse ) and minimize their dependence on costly proprietary software.

Our dynamic and experienced innovators have strong backgrounds in software engineering, web technology and application development.

Their distinct expertise in understanding complex business requirements and translating them into sound architectural software designs provide the foundations for our complete service offering and lead to the development of robust, scalable and adaptive web solutions.

Our solutions & services cover the entire J2EE open source application development life-cycle and are tailored to perfectly accommodate both your organizational and project requirements.

Whether you want to develop your project in-house, completely outsource the development or use a combination thereof, we can help you bridge the gap between people, processes and technology.

Most importantly, we understand that to implement a sustainable long-term IT strategy, reliability, reusability, flexibility and scalability are paramount.

Our mission is to make your organization agile by industrializing your software assets.

## Development services

At Quixiz, we do not believe in a one-fits-all approach. We want to deliver real business value and therefore deliver fully personalized solutions to adequately respond to your unique needs and objectives.

### Custom web applications

Quixiz has the skills to deliver a various range of prominent J2EE web applications with particular expertise in the custom development of:

- business critical applications,
- customer relationship management applications,
- content and document management solutions,
- knowledge, collaboration and business intelligence platforms.

### Collaborative development process

And as we have found that the greatest barrier to a truly collaborative relationship is friction caused by inevitable changes in priorities and scope through the course of a project, our development process has been specifically designed to anticipate and accommodate change.

## Consulting services

As organizations look for increased control, stability, flexibility and reusability of their software assets, a thorough scope analysis, sound software architecture and appropriate development environment and practices are crucial.

Quixiz can provide you with coaching, auditing and training services throughout the complete development life cycle.

### J2EE open source technologies

We can help you take optimal advantage of leading J2EE open source technologies and frameworks, such as Tomcat, Struts, Spring, Hibernate, CVS, Ant, Eclipse.

More importantly and on a broader scale, we can help you implement a sustainable long-term IT strategy by defining the appropriate system architecture, development tools, standards and best practices and thus setup the foundations for the development of all your business-critical applications.

And as your requirements and objectives are unique, we make sure that the right people are assigned to you and that they dedicate themselves into forging an efficient and fruitful working relationship.

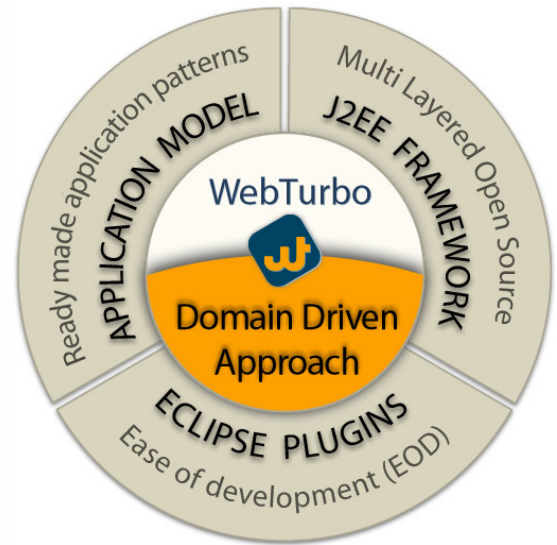

## WebTurbo

Quixiz is a strong advocate of the industrialization of software production and this orientation has materialized into Quixiz's domain-driven software factory solution, WebTurbo.

WebTurbo bundles a J2EE framework, a development environment and ready-made application patterns which provide the foundations for building robust, scalable and adaptive service-oriented web applications.

WebTurbo is designed to support three essential business objectives, namely:

- maximizing development rapidity and reliability,
- enhancing flexibility, scalability and cost effectiveness and
- ensuring application performance and productivity.

### Custom mission-critical applications.

WebTurbo's powerful and flexible Service Oriented Architecture (SOA) foundation enables developers to deliver mission-critical, reusable and integration-ready business applications, such as CRM, e-commerce, website and portal solutions or any activity-specific custom application you may need.

Summarized, WebTurbo helps you focus on developing crucial and advanced business functionalities and reduce time spent on plumbing.

### Reduce risks and speed up delivery

As such, developing with WebTurbo significantly reduces technical risks and speeds up the delivery of your projects.

WebTurbo is therefore the framework of choice for organizations seeking personalized rapid application development based on J2EE open source web technologies (Spring, Hibernate, Tiles,...).

Contact Quixiz for a WebTurbo demo session or surf to the Quixiz website for more detailed information and a WebTurbo datasheet.

*" It is not the strongest of the species that survive, nor the most intelligent, but the one most responsive to change. "*

Charles Darwin.

## Key references

Our "Open" approach and personalized development services have allowed us to be incorporated as a trusted partner in the IT strategy of market leading organizations, such as Belgacom, McCan Erickson, Cora, Match, Universal Media, IBM, Stuv.

For us this is the only proof that they recognize our added-value and we would be delighted to do the same for your organization.
